

## ATTORNEY DOCKET

## PATENT APPLICATION

2

REMARKS

To expedite allowance and further clarify the claimed embodiment, Applicants have added Claims 38 and 39, and amended Claims 8, 11, 16, 21, 23, 27, 31, 34 and 37. Applicants respectfully submit that Claims 8, 11, 16, 21, 23, 27, 31, 34, 37, 38, and 39 are now fully allowable. Applicants submit that all claims pending in this application are fully allowable and respectfully request reconsideration and favorable action in this case.

High Speed Low Power Communication Module Discussion

Examiners stated that the limitation of 'high speed low power' is indefinite. Applicants have amended the application to further clarify the invention to include a 'short-range' communication module and a 'long-range' communication module. Applicants have included a reference providing a definition of a short-range communication.

In one of the references provided, Short-Range Wireless Connectivity: A Complementary Comparison by *Puneet Gupta*, the author explains that the short-range wireless technology known as Bluetooth "is a high-speed, low-power microwave wireless link technology".

Streaming Audio Discussion

Examiners stated that an 'audio file' is equivalent to 'streaming audio'. Applicants have provided a definition of streaming audio to clarify the differences between audio files and streaming audio. For example, "...streaming audio includes playing audio or video immediately as it is downloaded from the Internet, rather than storing it in a file on the receiving computer first." A second reference defines streaming audio as "...streaming sound is played as it arrives. The alternative is a sound recording that doesn't start playing until the entire file has arrived." In other words, by downloading and storing the file, an electronic device incorporating teachings of the present invention will be able to play music without break-ups, pauses, and music stoppages attendant to streaming systems.

ATTORNEY DOCKET

PATENT APPLICATION

3

Applicants submit that Claim 1 is drawn toward the selection of audio files and not streaming audio. One skilled in the art can appreciate a discernable difference between an 'audio file' and 'streaming audio'.

Identifying an Electronic Device Discussion

Applicants have amended Claim 11 to further clarify the invention. In particular, Applicants would like to point out the added limitation of 'receiving an input from a user identifying the electronic device, the input including a reference identifying the electronic device' includes providing a reference to identify an electronic device.

CONCLUSION

Applicants have made an earnest effort to place this case in condition for allowance in light of the amendments and remarks set forth above. Applicants respectfully request reconsideration of the rejection and allowance of Claims 1, 4-11, 13-16, 18-21, 23 and 26-39.

Applicants believe that no further fee is due.

RESPECTFULLY SUBMITTED,  
White et al.

## MARKED UP VERSION OF THE AMENDED CLAIMS

IN THE CLAIMS

Claims 38 and 39 have been added. Claims 8, 11, 16, 21, 23, 27, 31, 34 and 37 have been amended as follows:

1. A system for communicating selected information to an electronic device, the system comprising:
  - a digital engine operable to maintain data associated with selectable audio information, the audio information comprising an audio file;
  - a communication engine communicatively coupled to the digital engine, the communication engine operable to initiate wireless communication of the data to the electronic device;
  - a graphical user interface operably coupled to the digital engine to provide available information to a user of a communication network and to receive an input from the user identifying a selected portion of the selectable information; and
  - wherein the interface operates in a web browsing environment and the wireless communication operates outside the browsing environment.
2. **(Deleted per First Amendment)** The system of Claim 1 further comprising an interface operably coupled to the digital engine, the interface operable to provide available information to a user of a communication network, and to receive an input from the user identifying the selected information.
3. **(Deleted per First Amendment)** The system of Claim 2, wherein the interface operates in a browsing environment and the wireless communication operates outside the browsing environment.
4. The system of Claim 1, wherein the wireless communication comprises communication via a cellular communications network.
5. The system of Claim 4, wherein the cellular communication network comprises a global system for mobile communications network.

## PATENT APPLICATION

2

6. The system of Claim 5, wherein the global system for mobile communications network operates between about 1.7 GHz and 2.0 GHz.

7. The system of Claim 4, wherein the cellular communication network comprises a code-division multiple access network.

8. (Amend) The system of Claim 1, wherein the wireless communication comprises communicating via a [high-speed, low-power] short-range microwave wireless link.

9. The system of Claim 8, wherein the wireless link comprises a Bluetooth link.

10. The system of Claim 8, wherein the wireless link operates around 2.4 GHz.

## PATENT APPLICATION

3

11. (Amend) A method for communicating selected audio information to an electronic device, the method comprising:

maintaining data associated with the selected audio information using a digital engine;

initiating wireless communication of the data to the electronic device;

presenting information associated with audio information within a graphical user interface associated with a communication network;

receiving an input from a user identifying the selected information; and

receiving an input from a user identifying the electronic device, the input including a reference identifying the electronic device.

12. (Deleted per First Amendment) The method of Claim 11 further comprising:

presenting information associated with audio information within an interface associated with a communication network; and

receiving an input from a user identifying the selected information.

13. The method of Claim 11 further comprising presenting information associated with identifying the electronic device.

14. The method of Claim 12 wherein the interface operates in a web browsing environment and the wireless communication operate outside the browsing environment

15. The method of Claim 11 wherein the wireless communication comprises communicating via a cellular communications network.

## PATENT APPLICATION

4

16. (Amend) An electronic device for receiving selected audio information via wireless communication, the device comprising:

a long-range communication module operable to receive wireless communication of information;

a [low-power] short-range RF communication module operably coupled to a processor module;

a storage medium operably coupled to the [high speed, low-power] short-range RF communication module, the storage medium operable to store selected audio information that comprises an audio file;

the [a] processor module coupled to the storage medium, the processor module operable to process received selected audio information; and

a display operable to display a web browser within a user interface.

17. (Deleted per First Amendment) The device as recited in Claim 16, wherein the communication module comprises a cellular modem.

18. The device as recited in Claim 16, wherein the device is a handheld computing device.

19. The device as recited in Claim 16, wherein low power RF module outputs audio information indirectly to an audio speaker.

20. The device as recited in Claim 16 further comprising software for processing the selected audio information.

21. (Amend) The device as recited in Claim 16, wherein the short-range communication[s] module is operable to scan frequencies.

22. (Deleted per First Amendment) The device as recited in Claim 16, further comprising a display operable to display a user interface.

## PATENT APPLICATION

5

Cs 23. (Amend) The device as recited in Claim 16 wherein the [high speed low-power] short-range RF communication module is operable with a 'Bluetooth' communication standard.

## PATENT APPLICATION

6

24. **(Deleted per First Amendment)** A method for communicating selected audio information to an electronic device, the method comprising:

- presenting information associated with audio information within an interface associated with a communication network;
- receiving an input from a user identifying the selected information;
- maintaining data associated with the selected audio information using digital engine; and
- initiating wireless communication of the data to the electronic device.

25. **(Deleted per First Amendment)** The method of Claim 24 wherein the interface operates in a browsing environment and the wireless communication operates outside the browsing environment.

## PATENT APPLICATION

7

26. The system of Claim 1 further comprising a wireless telephone.

C<sub>6</sub> 27. (Amend) The system of Claim 26 wherein the wireless telephone is operable to communicate with a [low-power, high speed] short-range wireless communication network.

28. The system of Claim 1 wherein the audio information includes at least one of a WAV file, an MP3 file or a MIDI file.

29. The system of Claim 1 wherein the audio information further comprises streaming audio information.

30. The method of Claim 11 further comprising presenting the information in a web browsing environment.

C<sub>7</sub> 31. (Amend) The device as recited in Claim 16 further comprising a wireless telephone, wherein the information received by the long-range communication module comprises a voice call.

32. The device as recited in Claim 16 wherein the audio file includes at least one of a WAV file, an MP3 file or a MIDI file.

33. The device as recited in Claim 32 wherein the audio information comprises streaming audio information.

## PATENT APPLICATION

8

34. (Amend) An electronic device for communicating selected audio information via wireless communication, the device comprising:

a [high speed, low-power] short-range RF communication module operable to communicate about 2.4 GHz;

C<sub>8</sub> a storage medium operably coupled to the communication module, the storage medium operable to store the selected audio information; and

a processor module coupled to the communication module, the processor module operable to process the selected audio information to play the selected audio information.

35. The device as recited in Claim 34 further comprising a display operable to display a user interface operably associated with a web browsing environment.

36. The device as recited in Claim 35 further comprising a cellular phone operable to communicate with a cellular phone network.

C<sub>9</sub> 37. (Amend) The device as recited in Claim [35] 36 wherein the cellular phone is operable to communicate the selected audio information.

38. (Added) The device as recited in Claim 34, further comprising:  
a display operable to display a user interface;  
a cellular phone operable to communicate with a cellular phone network; and  
wherein the processor is operable to process selected audio information in association with receiving a telephonic communication, wherein the selected audio information includes an audio file selected by the user of the cellular phone and received and stored within the storage medium prior to receiving the telephonic communication.

C<sub>10</sub> 39. (Added) The device as recited in Claim 37 further comprising the processor operable to process the selected audio information in association with receiving a telephonic communication, wherein the selected audio information includes an audio file selected by the user of the cellular phone and received and stored within the storage medium prior to receiving the telephonic communication.
